1) a. Array b. 1 c. 1.5 d. false e. nil
2) The fact that everything is an object, should come in handy at some point, maybe for wrapping things…
3) Yes, as long as you are diligent in tracking and correcting bugs in the code, the added level where bugs might occur is far outweighed by the ability you gain in making the product do what customers want it to and that all the features function properly.
4) It helps because it makes the developer focus on individual features. As long as that doesn't draw the developer's attention too far away from the functionality of the program as a whole, it is very helpful.
5) It makes it so there is no question as to what the code is supposed to do. Verbose means more typing and so feature files can get pretty complicated.
